

Design Proposal

Ritvik Karra, ritvikkarra7

September 2026

1 Introduction

This design proposal includes 2 different types of interferometer: the Mach-Zehnder Interferometer and the Michelson Interferometer. In principle, an interferometer uses the principle of interference between two paths to produce an output, giving it a wide variety of applications from transceivers, to imaging technology. This proposal covers the design, analysis, and simulation of various interferometers, discussing how different parameters affect its performance.
